

# App Engine Flexible and Standard Environments

Practice Quiz, 2 questions

**2/2 points (100%)****Congratulations! You passed!**[Next Item](#)1 / 1  
point

1.

Which of these criteria would make you choose App Engine Flexible Environment, rather than Standard Environment, for your application? Choose all that are correct (2 correct responses).

Wider range of choices for application language

**Correct**

That's correct! At the time of this writing, App Engine Standard Environment supports Java, Python, PHP, and Go, but in the Flexible Environment, you upload your own runtime to run code in a language of your choice.

Daily free usage quota

**Un-selected is correct**

Finer-grained scaling

**Un-selected is correct**

Ability to ssh in

**Correct**

That's correct. App Engine Flexible Environment lets you ssh into the virtual machines in which your application runs.
